

Charles Villa

Homework 1

- The only challenge I had was figuring out pytest because I've never used it before
- The requirements specification was good, I understood it well enough and it wasn't too complicated
- Pytest gave me a few issues but I just had to look up how to utilize it correctly
- I set up pytest to return "Tests Passed" which would only run if all of the test case assertions passed which would be how I knew when I was done
